Fast · Research · DeepThink

Made in India

Built for Indian researchers

THE PROBLEM

Research today is fragmented.

A researcher uses 5–10 different tools just to complete one project.

Too Many Separate Tools

Search engine, AI chatbot, citation tool, PDF reader, presentation software — all separate, all costly.

Generic AI Is Not Enough

Most AI tools are built for general use. None are designed specifically for academic workflows.

Citation Errors Waste Time

Creating and verifying citations manually is slow and error-prone, especially across 8+ formats.

No End-to-End Workflow

Existing solutions solve only parts of the research process. No platform covers the full journey.

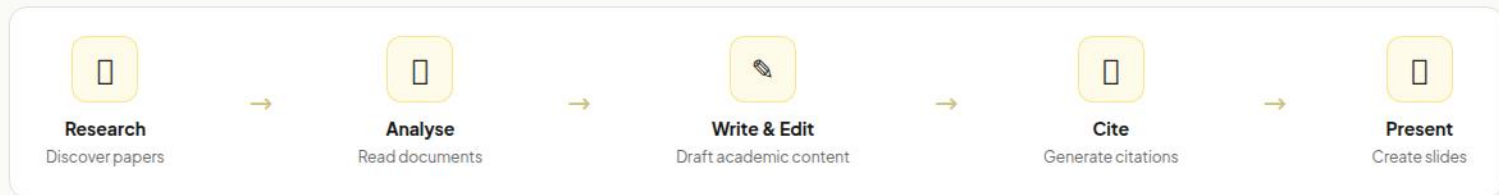

Overlooked Indian Researchers

Global platforms are not designed for Indian academic standards, languages, or pricing realities. India has over 1.5 million PhD scholars — an underserved market.

THE SOLUTION

One platform. The complete research workflow.

Dynamo AI replaces 5+ separate tools with a single unified workspace.

Research-First AI

Designed specifically for academic and research workflows, not a general chatbot.

Three AI Modes

Fast, Research, and DeepThink modes for different levels of task complexity.

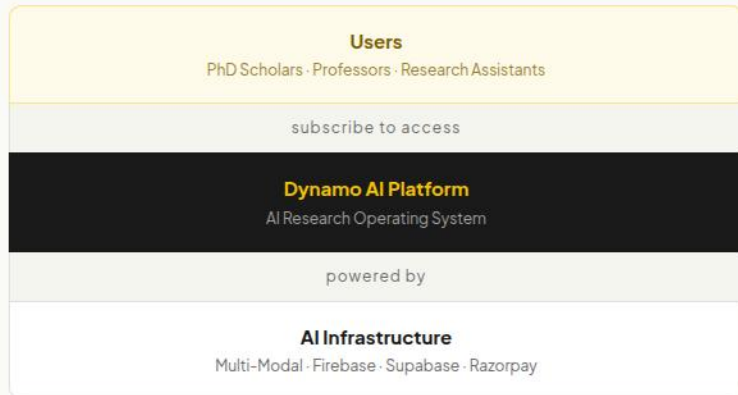

Privacy Protected

User data, research work, and documents remain protected with strong security practices.

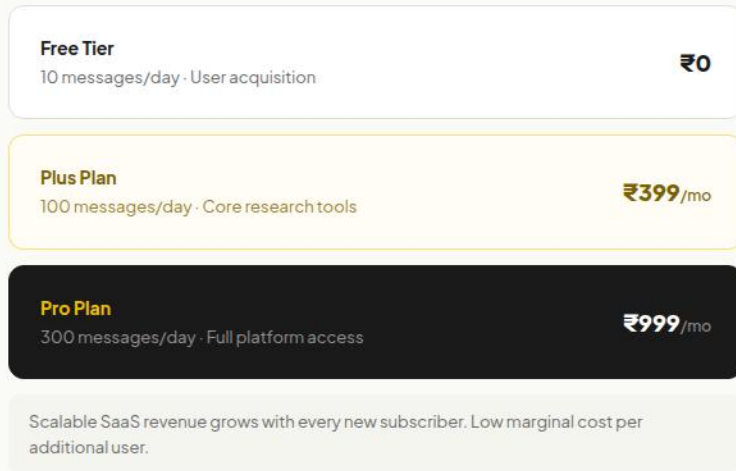

BUSINESS MODEL TYPE

SaaS Subscription with a Two-Sided Value Chain

PLATFORM STRUCTURE

MONETIZATION MODEL

CUSTOMER SEGMENT

Who We Serve

India has over 1.5 million active PhD scholars and thousands of research institutions.

PhD Scholars

- + Literature reviews
- + Thesis writing
- + Citation management
- + Continuous research update

Professors

- + Research publications
- + Teaching materials
- + Academic writing and editing
- + Slides creation

Research Assistants

- + Document analysis
- + Summarisation
- + Research analysis
- + Report writing

Institutions

- + Department productivity
- + Standardised tools
- + Cost consolidation
- + Bulk licensing

Core need across all segments: **save time, reduce costs, and improve research quality** — all in one place.

SERVICE OFFERING

What Dynamo AI Offers

Research Discovery

Web search, Research Mode, and DeepThink AI to find and synthesise relevant academic gaps.

Academic Writing & Editing

Write a Paper tool generates full academic papers by topic, with structured sections and references.

Citation Checker

Verifies in-text citations and reference lists across APA, IEEE, MLA, Harvard, Vancouver, Chicago.

AI & Plagiarism Detector

In-house AI text detection and plagiarism checker — no external API dependency.

Document Intelligence

Upload PDFs, DOCX, and TXT files. Dynamo AI summarises and stores them in a personal library.

Study Tools

Study guides, quiz mode, flashcards, mindmaps, flowcharts, and AI-generated image creation.

High-value segment

REVENUE STREAMS

Monthly Subscriptions

Recurring SaaS revenue from Plus and Pro users. Predictable, compounding growth.

Institutional Licences

Bulk access for universities, research departments, and academic institutions.

Future: API Access

Developer and enterprise API access planned as platform matures.

Low marginal cost per new subscriber — each additional user adds revenue with minimal incremental cost.

VALUE PROPOSITION

Why Dynamo AI?

India's First Research OS

No other platform combines research discovery, writing, citations, and document analysis into one unified workspace built for Indian researchers.

Research-First, Not Generic

Built from the ground up for academic workflows. Every feature — from DeepThink mode to citation verification — is designed specifically for researchers.

Affordable for Indian Users

Full research platform access from ₹399/month — a fraction of the cost of maintaining 5+ separate subscriptions globally priced.

Multi-Language Support

Supports Indian languages, making advanced research tools accessible to a wider audience beyond English-only platforms.

GROWTH STRATEGY

How We Plan to Grow

Geographic Expansion

1. Start: Indian universities and research institutions
2. Expand to South Asia and Southeast Asian markets
3. Long-term: global researcher communities

Product Enhancement

- + Multi-agent AI research assistants
- + Collaborative research workspaces
- + Enhanced document intelligence
- + Deeper regional language support

Institutional Partnerships

- + University-level bulk licence agreements
- + Research department integrations
- + Corporate R&D teams (tech and non-tech)
- + Government research bodies

Network effect: More researchers using the platform attracts more institutions. More institutions drive more individual researchers. A compounding growth loop.

RISKS AND CHALLENGES

Known Risks and How We Address Them

Transparency on risks is part of responsible platform development.

Competition

Current research workflows require researchers to move between Elicit for discovery, Jenni AI for writing, SciSpace for paper analysis, and separate citation and presentation tools. Dynamo AI replaces this fragmented stack with a unified Research Operating System built specifically for academic research.

Data Privacy

Researchers share sensitive academic work. Mitigation: strong privacy practices, no training on user data, and Supabase-backed secure storage with access controls.

Quality Control

AI outputs must meet academic standards. Mitigation: multi-model verification, temperature-controlled generation, and structured prompting for consistent, deterministic results.

Scaling Challenges

Rapid user growth increases AI compute costs. Mitigation: quota-based usage tiers, fallback model routing, and usage-linked subscription revenue to balance costs.

Trust and Safety: Citation verification, AI detection, and plagiarism checking are built-in — reinforcing academic integrity rather than undermining it.

FUTURE OPPORTUNITIES

Where Dynamo AI Is Headed

Multi-Agent AI Research Assistants

Autonomous agents that can conduct end-to-end literature reviews, synthesise findings, and generate reports independently.

Smarter Publishing Workflows

Guided journal submission workflows: formatting, compliance checking, and co-authorship management built in.

Institutional Research Solutions

Dedicated dashboards and admin tools for universities, research labs, and government departments to manage teams and track output.

Data-Driven Platform Intelligence

Aggregated (anonymised) usage patterns to identify research trends, improve recommendations, and personalise the experience.

International Expansion

Localised versions for South Asia, Southeast Asia, Africa, and other emerging research markets with strong academic growth trajectories.

Monetisation Expansion

Annual billing discounts, API access tiers, white-label licences, and premium corporate research packages.

Dynamo AI — India's Research Operating System

One platform that replaces the fragmented research toolchain for India's 1.5 million PhD scholars, professors, and research professionals.
